

SalmonScape

Welcome!

Get started

SalmonScape, the Washington Department of Fish and Wildlife's interactive, computer mapping system, is one of the most important tools created thus far to deliver scientific information to those involved in on-the-ground salmon recovery projects.

SalmonScape delivers the science that helps recovery planners identify and prioritize the restoration and protection activities that offer the greatest benefit to fish. The site also offers a significant environmental education tool for middle school and high school students. SalmonScape merges fish and habitat data collected by state, federal, tribal and local biologists and presents it in an integrated system that can be readily accessed by other agencies and citizens. >>> [MORE INFORMATION](#)

SalmonScape is an interactive mapping application designed to display and report a wide range of data related to salmon distribution, status, and habitats. The data sources used by SalmonScape include stream specific fish and habitat data, and information about stock status and recovery evaluations.

Make sure to check out [SalmonScape Help](#) or [FAQ](#) for other information. Would you like to send [Feedback](#)?

Browser Requirements:

SalmonScape was developed for Chrome and Internet Explorer 9.0 and higher. It may not work with other browsers or older versions of Internet Explorer. The IE security setting must be set to "Medium". SalmonScape works best with screen resolutions of 1024 X 768.
